

ENGLANDER MODEL 28 DD SS

Manufacturer's Comment

Here is the stove America has been waiting for . . . the Fireplace Space-saver. Years of experience by professional engineers and craftsmen have been carefully designed into this newest member of the fine line of Englander stoves.

Designed exclusively for hearth and fireplace installation, the Englander with its ornamental brass trim and firescreen, is an added enrichment to any fireplace setting. For those concerned about losing the romance of being able to watch their fire, the new Fireplace Spacesaver offers all the charm and coziness of the fireplace combined with the practicality of a wood heating stove.

Manufactured of the finest American-made $\frac{1}{4}$ " steel, the Englander, with such special features as the completely hand-welded, airtight firebox, the special door seals, gravity wedge door lock, special draft controls and other safety features make it virtually airtight. This is an all-important factor in your control over heat, extended wood burning time, and most important—the safety of your home. The inner walls of the Englander are

lined with full $2\frac{1}{2}$ " thick high refractory brick. This brick lining helps to maintain a more even temperature within the firebox as fire levels vary between loadings.

Your home will have "even" heat distribution with Englander's unique forced air circulating system. This system eliminates the one room high heat build-up normally associated with non-circulating heaters. This is especially important to homeowners living in large homes or homes having hallways and areas where the heat has to move around corners.

The Englander can save you from 50% to 100% of the cost of heating your home compared with the cost of conventional heating methods. The flat top surfaces of this stove offer over $5\frac{1}{2}$ sq. ft. of surface which may be used for cooking in the event of power failures. Installation could not be simpler. Just set the self-sealing backplate over your existing fireplace opening and slide the stove into position. No holes to drill, no need to deface your fireplace. Can be installed in less than 1 minute. Heats approximately 2,000 sq. ft. Englander also offers 5 other basic designed stoves in 17 design variations.

All Englander wood stoves are fully approved to UL Safety Codes No. 1482, ANSI/UL 737, and F&R 12 by Froehling & Robertson, Inc; and B.O.C.A. Research Report 80-9. Also approved for use by the Tennessee Valley Authority.
