

LANGE 6302K

Manufacturer's Comment

The Lange foundry in Svendborg, Denmark has been handcrafting elegant, durable and highly efficient cast iron woodstoves for over 125 years. The stoves' classic beauty and exceptional performance have made them popular in Europe as well as in the United States. The reasons are simple. —First, Lange's air-tight construction ensures steady, even heat output and permits overnight burning.

—Lange designs are durable and safe. Joints are bolted and cemented and doors are individually hand-filed for air-tightness. Lange employs the famous S-pattern air flow (see diagram) and heat exchangers (on models 6302K and 6303) which channel the heat within the stove, thereby radiating more heat into the room.

—Lange's dual-baffled draft controls provide easy starting, improved heat regulation, and better mixing of incoming air with burning fuel.

—Lange's heat exchangers extract the maximum amount of heat from the least possible amount of wood.

—Lange's workmanship and designs are unsurpassed in elegance and variety. Ten models (including coal stoves,

combination wood-coal stoves, cook stoves and a ship stove) are available in flat black or skillfully applied porcelain enamel in rich colors (red, blue, green and black). Bas-relief motifs of mythological and medieval origin enhance the stoves' beauty.

The Lange 6302K is an unusually powerful heater, with additional heat radiation achieved by the large amount of heavy cast iron, by the large second tier heat exchanger and by the circulation of combustion gases through a unique internal baffle system. The 6302K takes a 24-inch log and has been tested in northern climates to heat 8000 to 10,000 cubic feet. Not only does the second tier heat exchanger boost the radiant heat output of the 6302K, it also contains an oven and cooking plates with a vent for temperature regulation.

A shorter version of the 6302K is the Lange 6302A as shown in color on the back cover of this Directory. This stove without the second tier heat exchanger, standing 34-inches high and weighing 272 pounds, consumes approximately the same amount of woodfuel and has been tested in northern climates heating 7000 to 9000 cubic feet. The top

surface of the 6302A also has cooking plates. A knob above the draft controls actuates a by-pass in the baffle for quicker starting.

All models have been tested according to UL standards and are listed with the Maine Energy Testing Laboratory.

Specifications

H/W/L:	50½ x 16 x 34 in.
Flue Height (top):	47¾ in. (A 35½ in.)
Flue Size:	5 in.
Log Length:	24 in.
Weight:	370 lbs.
Materials:	Cast iron
Colors:	Flat black (\$980); blue or green enamel (\$1224); red enamel (\$1354).
