

Weld on baffle bottom,
purpose unknown at this
time.

The image shows a close-up of a dark metal structure. At the top, there is a circular weld. Below it, a horizontal metal bar is visible. On the right side of this bar, a small pin is inserted into a hole. Further down, another horizontal bar is shown, featuring a brass-colored rectangular plate with a pin passing through it. To the left of this plate, there is a small circular hole in the metal. Red arrows point from the text boxes to these specific features: the top weld, the pin on the upper bar, the pin on the lower bar, and the hole on the lower bar.

Baffle pin placement
changed. Old placement
hole still in place.
